Website Projects Documentation

Sweet Crumbs Bakery, NutriLife and The Urban Plate Café

Project	File	Type
1. Sweet Crumbs Bakery	project-1.html	Bakery storefront with search, filter and cart counter
2. NutriLife	project-2.html	Healthy-eating information site (no JavaScript)
3. The Urban Plate Café	project-3.html	Restaurant site with menu filter and table reservation

Prepared from the three HTML files as supplied. Statements in this document were checked against the source code and against renders in headless Chromium at 1366 px and 390 px widths. See screenshots.pdf for the visuals.

Contents

- 1. Overview and shared architecture
- 2. Project 1: Sweet Crumbs Bakery
- 3. Project 2: NutriLife
- 4. Project 3: The Urban Plate Café
- 5. Cross-project comparison
- 6. Issues found and recommended fixes
- 7. Deployment and customisation

1. Overview and shared architecture

All three projects are single-file static websites. Each file contains its own HTML structure, a `<style>` block and, where needed, a `<script>` block. There are no frameworks, libraries, build tools or back ends.

Shared characteristics

- **Page pattern:** header, navigation bar, a series of full-width `<section>` blocks with anchor ids, and a footer. Navigation links jump to sections with in-page anchors.
- **Styling:** Arial, centred text, card layouts with rounded corners and soft shadows, and one accent colour family per site.
- **Layout:** Flexbox (project 1) or CSS Grid (projects 2 and 3) for card grids; one media query per page for small screens.
- **Images:** all photos are hot-linked from external servers, so an internet connection is required to see them.
- **Forms:** all forms are front-end only. Nothing is transmitted or saved.
- **Sample content:** reviews, offers, chefs and contact details are placeholders, and the pages say so in places.

Technology

Layer	What is used
Markup	HTML5: header, nav, section, footer, form, table, label
Styling	CSS3: Flexbox, Grid, media queries, linear gradients, transitions, sticky positioning (project 1)
Behaviour	Vanilla JavaScript: querySelectorAll, dataset, inline style changes to show and hide elements, form submit handlers, alert() and textContent updates
Hosting	Any static host or opening the file locally

2. Project 1: Sweet Crumbs Bakery

File: project-1.html **Purpose:** a bakery storefront where visitors browse products, search and filter them, add items to a cart counter and submit a custom cake request.

Colour palette

Page background	Header	Nav / footer	Button	Offers band
#fff8f0	#f5d6d6	#6b3737	#b85c5c	#f8e2df

Page sections

Section (id)	Content
Header	Logo text with emoji and tagline 'Freshly Baked with Love'
Nav (sticky)	Home, Products, Custom Cakes, Offers, About Us, Contact, and a Cart link showing the item count. Sticks to the top while scrolling.
Hero (#home)	Full-width background photo with a dark overlay, headline, and two buttons: Explore Our Menu and Order a Cake
Products (#products)	Search box, five category pills plus All, and seven product cards
Custom cakes (#custom)	Order form with cake type, flavour, size, occasion, preferred date and instructions
Offers (#offers)	Three offer boxes: Birthday Special (10% off), Cookie Combo (INR 249), Festive Treats
About (#about)	Two paragraphs about the bakery
Reviews (#reviews)	Three five-star sample testimonials (Priya, Rahul, Ananya). Not linked from the nav.
Contact (#contact)	Sample phone, email, address and hours, plus a message form
Footer	Quick links, social names (text only) and a 'Student project demo' copyright line

Product catalogue

Product	Category	Price (INR)
Birthday Cake	cake	650
Wedding Cake	cake	2,500
Chocolate Cake	cake	550
Cupcakes	cupcake	80
Fresh Pastry	pastry	90
Chocolate Cookies	cookie	150
Chocolate Brownie	brownie	120

JavaScript behaviour

Function	Triggered by	What it does
addToCart(name)	Add to Cart button click	Increments cartCount, pushes the name into the cartItems array, updates the nav counter and shows 'Added X! Cart items: ...' under the grid.

Function	Triggered by	What it does
filterProducts(category)	Category pill click	Shows cards whose data-category matches (or all), hides the rest, and clears the search box.
searchProducts()	Key release in the search box	Hides cards whose title does not contain the typed text (case-insensitive).
submitCake(event)	Custom cake form submit	Blocks the default submit, rejects a preferred date earlier than today with an alert, otherwise shows a sample confirmation alert and resets the form.
sendMessage(event)	Contact form submit	Blocks the default submit, thanks the visitor by name in an alert stating that no real message is sent, and resets the form.

Responsive behaviour

At 600 px and below: nav links shrink to 14 px and wrap, the hero heading drops from 38 px to 28 px, cards become full width (capped at 350 px) and section padding is reduced. Because the product grid uses flex-wrap, it reflows at every width without a breakpoint. At 390 px the page has no horizontal scrolling.

Limitations

- The cart only counts items. There are no quantities, totals, removal or checkout, and it resets on reload.
- The search and category filter do not combine: searching ignores the chosen category, and picking a category clears the search.
- Search runs on key release, so pasting with the mouse does not filter.
- The Birthday Cake card and the hero use the same photo; the Chocolate Cake and Chocolate Brownie cards also share one photo.
- Cake date validation only blocks past dates; there is no lead-time rule and no total price.
- The file begins with a ```html line and ends with ```, which are copy-paste leftovers (see section 6).

3. Project 2: NutriLife

File: project-2.html **Purpose:** an educational healthy-eating site with recipes, a weekly meal plan, a nutrition guide, tips and a shopping checklist. It contains no JavaScript.

Colour palette

Page background	Header / buttons	Nav bar	Hero / tips	Button hover
#f8fff5	#2e7d32	#e8f5e9	#fff9db	#1b5e20

Page sections

Section (id)	Content
Header	'NutriLife' with tagline 'Eat Smart, Live Well!'
Nav	Home, Recipes, Meal Plans, Nutrition, Healthy Tips, Shopping List, Contact (not sticky)
Hero (#home)	Headline, intro text, a salad photo and an Explore Recipes button
Recipes (#recipes)	Six recipe cards in a three-column grid
Meal planner (#mealplan)	Seven-day table with breakfast, lunch, dinner and snack columns
Nutrition (#nutrition)	Table of five nutrient groups with importance and food sources, plus a general-information disclaimer
Tips (#tips)	Seven healthy-eating tips in a bulleted list
Shopping list (#shopping)	Seven tick-box items
Contact (#contact)	Name, email and message form
Footer	Name, tagline, three links and copyright

Recipes

Recipe	Time	Calories (approx.)	Key ingredients
Healthy Breakfast	10 min	300	Oats, milk, banana, nuts
Fresh Vegetable Salad	10 min	180	Cucumber, tomato, carrot, lemon
Fruit Smoothie	5 min	200	Banana, strawberries, milk
Vegetable Soup	25 min	150	Carrot, beans, peas, spices
Dal and Rice	30 min	350	Lentils, rice, turmeric, spices
Chicken and Vegetables	30 min	350	Chicken, carrots, beans, spices

Weekly meal planner

The planner is a static seven-row table mixing South Indian and North Indian meals (for example idli and sambar, dosa, upma, poha, chapati and dal, vegetable pulao) with egg and chicken dishes on selected days. Snacks are fruit, nuts, yogurt, banana or buttermilk.

Interactivity

There is no script. The only interactive elements are native browser features: anchor navigation, hover colour changes on links and buttons, tick-boxes in the shopping list (state is lost on reload), and form validation from the `required` and `type='email'` attributes. The contact form has `action='#'`, so submitting it simply reloads the page position.

Responsive behaviour

At 768 px and below the recipe grid becomes one column, nav links wrap, the hero image fills the width at 220 px height, and table text and padding shrink. At 390 px the page is about 12 px wider than the screen (402 px), caused by the tables, so it scrolls sideways slightly.

Limitations

- No JavaScript, so no search, filtering, saved shopping list or working form.
- Three recipe images (soup, dal and rice, chicken) use temporary Google thumbnail URLs (encrypted-tbn0.gstatic.com), which can stop working at any time.
- The Fresh Vegetable Salad card and the hero use the same photo.
- Calorie figures are rough estimates and the nutrition guide is general information only, as the page itself states.
- The nutrition and meal-plan tables overflow slightly on narrow phones; wrapping them in a scrollable container would fix this.

4. Project 3: The Urban Plate Café

File: project-3.html **Purpose:** a restaurant website with a filterable menu, chef profiles, gallery, reviews, opening hours and a table reservation form.

Colour palette

Page background	Header / footer	Nav / headings	Hero band (intended)	Gold accent
#fdf8ed	#173d2b	#244d38	#eee5d3	#b58b3b

Page sections

Section (id)	Content
Header	Café name and tagline 'Good Food. Great Moments.'
Nav	Home, About, Menu, Chefs, Gallery, Reviews, Reservation, Contact (not sticky). Opening Hours has no nav link.
Hero (#home)	Welcome text, a restaurant interior photo, and Explore Menu and Reserve a Table buttons
About (#about)	One paragraph about the café
Menu (#menu)	Filter buttons, search box and six dish cards in a three-column grid
Chefs (#chefs)	Chef Arjun (Indian), Chef Priya (desserts and bakery), Chef Rahul (Italian)
Gallery (#gallery)	Three photos in a grid
Reviews (#reviews)	Three sample reviews with star ratings
Hours (#hours)	Table: Mon to Fri 10 AM to 10 PM, Sat 9 AM to 11 PM, Sun 9 AM to 10 PM
Reservation (#reservation)	Booking form with confirmation message
Contact (#contact)	Placeholder address, phone, email, an Instagram link and a map placeholder
Footer	Links, copyright and a 'created for a Web Development assignment' note

Menu

Dish	Category	Dietary note	Price (INR)
Paneer Curry	Indian	Vegetarian	220
Chicken Biryani	Indian	Non-vegetarian	280
Italian Pasta	Italian	Vegetarian	250
Margherita Pizza	Italian	Vegetarian	240
Chocolate Cake	Dessert	Contains dairy, may contain eggs	150
Cappuccino	Dessert	Vegetarian	120

JavaScript behaviour

Code	Triggered by	What it does
filterMenu(category)	Filter button click	Shows cards matching data-category (All, Indian, Italian, Dessert) and hides the others. Does not clear the search box.

Code	Triggered by	What it does
searchMenu()	Key release in the search box	Hides cards whose dish name does not contain the typed text.
Date minimum (on load)	Page load	Builds today's date as YYYY-MM-DD and sets it as the min attribute of the reservation date field, so earlier dates cannot be chosen.
bookingForm submit handler	Reservation form submit	Prevents the default submit, shows 'Thank you, NAME! Your reservation request has been recorded for this demo.' in the message paragraph and resets the form.

Reservation form fields

Field	Rules
Full name	Required text
Phone	Required, exactly 10 digits (pattern [0-9]{10}, max length 10)
Email	Required, valid email format
Date	Required, today or later
Time	Required: 10 AM, 12 PM, 2 PM, 6 PM or 8 PM
Guests	Required: 1 to 6 people
Special requests	Optional text

Responsive behaviour

At 768 px and below the menu and gallery grids become a single column, nav links wrap and the hero image shrinks to 220 px high. At 390 px the page has no horizontal scrolling.

Limitations

- A stray 's' character on its own line before the .hero rule breaks that CSS rule, so the hero section loses its cream background and extra padding (see section 6).
- Reservations are not stored, checked for availability or sent anywhere; the time slots do not depend on the day.
- Search and category filter are independent, and search runs on key release only.
- The contact section still contains placeholder text and the Opening Hours section is not in the nav.
- Chocolate Cake uses the same photo as the bakery hero in project 1.

5. Cross-project comparison

Feature	Project 1 Bakery	Project 2 NutriLife	Project 3 Café
Sticky navigation	Yes	No	No
JavaScript	Yes (5 functions)	None	Yes (2 functions plus 2 blocks)
Search	Yes	No	Yes
Category filter	Yes (5 categories)	No	Yes (3 categories)
Cart / ordering	Counter only	No	No
Booking form	Custom cake request	No	Table reservation
Contact form	Yes (alert)	Yes (no action)	Contact details only
Tables	No	Yes (2)	Yes (1)
Card layout	Flexbox, fixed 250 px cards	Grid, 3 columns	Grid, 3 columns
Breakpoint	600 px	768 px	768 px
Photos	Unsplash	Unsplash and Google thumbnails	Unsplash
Price currency	INR	n/a	INR

6. Issues found and recommended fixes

These were found by reading the code and by rendering each page. They are listed by importance.

#	File	Issue	Recommended fix
1	project-3.html	A stray 's' on its own line before .hero turns the selector into 's .hero', so the hero background and padding are never applied.	Delete the 's' line.
2	project-1.html	The file starts with ```html and ends with ```. Text before the doctype is shown on the page and puts the browser in quirks mode.	Delete the first and last lines.
3	project-2.html	Three images use encrypted-tbn0.gstatic.com thumbnail links that are temporary and may break.	Download the images or use Unsplash URLs.
4	project-2.html	Tables make the page 12 px wider than a 390 px screen.	Wrap each table in a div with overflow-x: auto.
5	projects 1, 3	Search and category filter are independent, so one resets or ignores the other.	Keep one shared function that reads both the active category and the search text.
6	projects 1, 3	Search uses onkeyup, so mouse paste and browser autofill do not trigger it.	Use the 'input' event (oninput).
7	project-1.html	Cart has no quantities, totals, removal or persistence.	Store items in an object with quantity and price, render a cart panel, save to localStorage.
8	projects 1, 3	Several cards reuse the same photo (for example the hero and a product).	Use a distinct image per item.
9	project-2.html	Contact form uses action='#' and has no script, so nothing happens.	Add a handler like the other projects or connect a form service.
10	all	Photos are hot-linked and need internet access; missing images show a broken-image icon.	Download images into an images/ folder and reference them locally.
11	projects 2, 3	Nav is not sticky and some sections (Opening Hours, Reviews) are not linked.	Add position: sticky to nav and add the missing links.

Suggested snippet for issues 5 and 6 (projects 1 and 3 share the pattern):

```
let activeCategory = 'all';

function applyFilters() {
  const text = document.getElementById('search').value.toLowerCase();
  document.querySelectorAll('.card').forEach(card => {
    const okCat  = activeCategory === 'all' || card.dataset.category === activeCategory;
    const okText = card.querySelector('h3').textContent.toLowerCase().includes(text);
    card.style.display = (okCat && okText) ? 'block' : 'none';
  });
}
function filterProducts(cat) { activeCategory = cat; applyFilters(); }
// HTML: <input id="search" oninput="applyFilters()">
```

Suggested fix for issue 4:

```
<div style="overflow-x:auto">
  <table> ... </table>
</div>
```

7. Deployment and customisation

Running locally

- Keep the three files in one folder and double-click a file, or run `python3 -m http.server 8000` in that folder and open `http://localhost:8000/project-1.html`.
- An internet connection is needed to display the photos.

Publishing

- Any static host works: GitHub Pages, Netlify, Vercel or a plain web server.
- Rename one file to `index.html` if you want it to be the home page, or add a simple landing page linking to all three.
- Before publishing, replace placeholder contact details and sample reviews with real content, and fix the issues in section 6.

Customising

To change	Where
Colours	The <style> block at the top of each file. Replace the hex codes listed in each project's palette.
Add a product or dish	Copy one div.card block, edit the text, price and image, and set data-category (projects 1 and 3). New categories also need a filter button.
Prices and currency	The price paragraph in each card (the rupee symbol is plain text).
Contact details	The Contact section and footer of each page.
Make forms real	Change the form action to a backend or a form service endpoint and remove the preventDefault handlers.
Breakpoints	The @media rules at the bottom of each style block (600 px in project 1, 768 px in projects 2 and 3).

Browser support

The pages use only widely supported features (Flexbox, Grid, sticky positioning, standard form validation) and work in current versions of Chrome, Edge, Firefox and Safari on desktop and mobile.
